Introduction

The purpose of education is to promote life-long and broad learning leading to holistic development and well-being of all learners as well as to improve their skills for living in a sustainable way.

Phenomenon-based learning (PhBL or PhenoBL) is a multidisciplinary, constructivist form of learning or pedagogy where students study a topic or concept in a holistic approach instead of in a subject-based approach.

The goal of phenomenon-based learning is to prepare learners to handle real-world problems in an active learning environment using various discovery methods. This is easier said than done. In this practical, hands-on course, the course participants will explore the path to PhBL by using practical case studies, best practices, and examples of the failed cases too.

Benefits of this course:

Understand the basic principles and evolution of Phenomenon Based Learning

Explore your own ways of handling the PhBL Projects

Learn from the practical case studies

Improve your classroom learning environment where students will take the responsibility for their own learning (Student Agency)

Course Content

Introduction to 21st Century Skills

Content Vs Skills

Old Vs New Pedagogy

Transversal Competences

Curriculum as guiding document: Learning Outcomes

Phenomenon Based Learning: Introduction

Understand the difference between Project Vs Phenomenon Based Learning

Evolution of PhBL : Process and Outcome

Reality Vs Myths

Assessing the Learning

Case studies and Examples from the Finnish School

Adapting Phenomenon Based Learning in your context

Case Study from Columbia

Designing a PhBL Plan

Reflections and Summary
